I spent the weekend fishing. Now I have a funny feeling in my throat and I'm making strange ribbiting noises. What is the matter?

I'm Doctor Tom Magne, and this is my magnetic resonance scanner. I'm going to use it to take pictures of your insides, to see if you are ill.

WOW! RIBBIT! How does it work?

It works with a big magnet inside, so it is very important that you don't have any metal things on you.
When the machine starts working it will be very loud, like the noise of the traffic on a big road. When you hear the noise you have to keep very still, so I can take good pictures. You can have earplugs to keep the noise down.

You simply lie on the table. Then the table goes into the opening. There's nothing to be afraid of. It's not going to hurt.

Will it take long? RIBBIT!

It's going to take 30 to 60 minutes.
I’ve found the problem, Mr Duckfoot. It’s not serious. You’ve got a frog in your throat. All you have to do is stand on your head. The frog will come out on its own.
