

RCR/SCoR Gap Analysis Tool

This tool has been designed to give you an example of what evidence may be required to meet the Quality Imaging Standard (QSI).

It is not a definitive set of examples, rather it is meant to enable you to make a start and help you think about what evidence you may have to meet the QSI.

It is important that any evidence you have is relevant to your service and recent. If you think you have the written evidence available then use the Yes/No column to change to a yes. The tool will then RAG rate each section for you.

An example of the policies and/or procedures you need are shown at the top of each section and again is not definitive.

Should your service wish to proceed to accreditation you can use the gap analysis to gauge your readiness. If you are around 60 -75% compliant it may be worthwhile contacting UKAS for advice or pre-assessment.

Further support and guidance is always available through the colleges via
